

### Concept 3: The Arch

The character is predominantly curvilinear with a large amphitheater and plaza, skate bowl with screen, water feature, trees, lawn, a grid of multiuse poles defining a visually more complex open civic park. The heart of the park is the plaza, amphitheatre and water feature.

- Existing skateboard bowl is retained and provides new skate features.
- A centrally located plaza, amphitheater, climbing wall, and water feature activate the park.
- ADA access is provided throughout.
- A medium size lawn areas for passive and active use creates a sense of green civic open space.
- The existing bowl and topography is integrated, and limits the potential for a future integrated relationship with the QFC development.
- The sidewalk zone is furnished with chairs, benches, and street trees.
- Amphitheater seating and a multiuse pole framework is provided to facilitate special events such as performances, fairs and festivals.
- Evening lighting illuminates park features and provides a safe environment.
